

Ultra Muscleze™

the driving force behind swift recovery
and improved energy levels

Whether you are young or old, healthy or not, helping to preserve energy levels and support muscle recovery is important to everyone.

Support your patients' energy levels and help them to reach new energetic heights with our super charged formula that contains a huge 280mg of magnesium Chelazome™ per teaspoon.

Unlike other magnesium powders, Ultra Muscleze™ is extremely well tolerated by the GI tract. Even those with existing gastrointestinal upset find that they have no side effects when using Ultra Muscleze™, even if they have with other magnesium powders.

With potassium, glutamine, malic acid, B vitamins and other key activators of mitochondrial function, Ultra Muscleze™ is crucial to those with compromised energy levels and reduced muscle function and is ideal for athletes looking for speedy recovery between training sessions.

Additionally, Ultra Muscleze™ contains no preservatives and mixes easily into a refreshing tasty drink that leaves all other magnesium powders behind.

Ultra Muscleze™... Powerful. Established. Essential.

Have you discovered Australia's leading magnesium powder – big on taste, big on magnesium!

"I have been prescribing Ultra Muscleze™ for many years. The combination of magnesium with malic acid, B vitamins, glutamine, taurine, L-carnitine and selenium makes this formula an excellent supplement to help correct magnesium deficiency states such as low cellular energy, poor blood sugar control and poor adrenal functioning. I prescribe Ultra Muscleze™ to my patients for a range of conditions and they report superb results using a standard dose twice daily. I believe a major factor in the success of my busy practice is prescribing quality supplements such as Ultra Muscleze™ that make a significant difference to people's health."

Synergistic Supplements for Joint and Muscle Support

Eskimo-3 and Eskimo Kids

Eskimo-3, the UK's number one fish oil, is the preserve of those who know and care about the quality and purity of the fish oil they use. This high strength EPA/DHA formula is one of the cleanest fish oils available in the UK and has come out on top in recent purity studies measuring heavy metals and dioxins. Eskimo-3's purity is matched by its stability. Unstable fish oils react quickly with the oxygen in the air and go rancid, causing more harm than good - but all batches of Eskimo-3 undergo an exclusive stabilising process to keep it fresh and clean for its entire shelf life.

Eskimo-3:

- Contains 750mg of EPA and 500mg of DHA per teaspoon
- Is made from wild deep sea fish
- Has been purified so heavy metals, dioxins and other contaminants are well below acceptable levels
- Has been independently tested and proven to be one of the cleanest fish oils available
- Has not been chemically modified
- Contains lemon oil so no odour or fishy aftertaste
- Comes in liquid and capsules
- Is available as a children's supplement in the form of Eskimo Kids which contains omega 3, 6 & 9 to give them the best possible balance

ChondroCare™

ChondroCare™ is a glucosamine/chondroitin supplement with a difference. Not only does it contain high levels of premium grade glucosamine and chondroitin, it also provides the essential building block MSM and accessory nutrients crucial to connective tissue support such as manganese and zinc.

ChondroCare™:

- Contains the three building blocks for healthy cartilage – glucosamine, chondroitin and MSM
- Contains zinc, manganese, copper and selenium to support connective tissue
- Supports normal joint strength and flexibility
- Supports collagen synthesis for optimal shock-absorbing ability
- Protects against free radical damage to joint tissue by supplying antioxidant support
- Is safe and effective for long term use

Glucosamine Sulphate

Nutri's Glucosamine Sulphate contains 500mg of high quality, high absorption glucosamine which is free from environmental contaminants and boasts a 98.9% purity level which leaves other products standing. Practitioners come back to Nutri's Glucosamine Sulphate time and time again because quality is key and we believe that the most expensive product is one that doesn't work. Glucosamine Sulphate has proven to be a hit with patients because of its obvious results that the patient can really feel.

Glucosamine Sulphate:

- Is used by the body as a building block for the synthesis of cartilage
- Can also support connective tissue formation
- Uses potassium as a stabiliser rather than sodium so is suitable for those on a sodium restricted diet
